

Escuela Superior de Huejutla.

Communication and technology, using present perfect.

MTI. Cristhian Rojas Vite.

Semester July-December, 2017.

Abstract

In this topic we will cover the different aspects about technology, communication and at the same time, how you can use English to communicate your ideas.

Technology and communications have increased a lot in the recently years, and they have been changing a lot and English too, as soon as English became very important around the world.

Key words: Technology, communication, present perfect, have, has,

HOW TECHNOLOGY **HAS CHANGED** OUR LIVES FOREVER

Technology **has changed** the way how we watch television.

Our television experience **has also evolved** along with the development of technology. In other words, we are not prisoners of the television nowadays. We can watch whatever we want at any time we want. We can even watch the television on the go with the help of our mobile devices.

HOW TECHNOLOGY **HAS CHANGED** OUR LIVES FOREVER

Technology **has changed** the way how we share.

We don't use the traditional methods of sharing information. All of us have our own accounts on social media networks and we simply use them to share content. In fact, the social media networks have given us the opportunity to share anything at any given time. We can even access our social media accounts with different devices whenever we want.

HOW TECHNOLOGY **HAS CHANGED** OUR LIVES FOREVER

Technology **has changed** the way how we read.

The books have been replaced with e-readers, tablets and smartphones along with the development of technology. Therefore, we don't need to carry heavy books that can break our backs. The e-readers and tablets can also read out something for us. Therefore, we can even go through books while we are driving on the road. We **have traveled** into the future with these new inventions, but people **have forgotten** real books.

HOW TECHNOLOGY **HAS CHANGED** OUR LIVES FOREVER

Technology **has transformed** the way how we communicate.

Heading over to someone's home to have a chat and picking up the phone **have become** things in the past. That's because the Internet and smartphones **have improved** the way how we communicate with each other.

Conclusions.

Nowadays globalization has powered in part by tremendous and quick ICT advances, and young people are often among the first to take advantage of new developments in this area. Youth are capable of using ICT in diverse and novel ways, as a result of which traditional forms of socialization such as the family and school are increasingly being challenged and overtaken. The next generations will have to adapt these new things in order to get into the globalization rhythm.
