

Editorial

The Mexican Journal of Bioethics is a publication of the Autonomous University of the State of Hidalgo for the dissemination of bioethical knowledge, from a multidisciplinary vision.

In this edition, as in previous ones, the topics discussed have an intimate relationship with Bioethics, one of them presented in the Heritage Chair in Bioethics “Dr. Guillermo Soberón.”

The study Attitudes towards transgender people is approached from an evaluation of university students in Mexico. Also an article to analyze the bioethical principles that can be transgressed by trans women. The issue of patient safety is of great importance in the provision of health care services, especially to ensure safe care, in accordance with the scientific and ethical principles that govern medical practice. In this regard, the article Evaluating patient safety: Analysis of adverse events in hospitals in Hidalgo is presented, in which a descriptive observational study of adverse events in hospitals in the state of Hidalgo is carried out, between 2013 and 2021 and highlighting the need to develop specific prevention and reporting strategies. Likewise, a review article on the regulatory documents that impose compliance with essential actions for patient safety in Mexico. Finally, also a review of the regulatory framework for the interruption of pregnancy in Mexico based on the elimination of its prohibition during the first twelve weeks of gestation.

I thank and recognize the team for their work in the preparation, promotion and dissemination of this Magazine.

"Love, Order, and Progress".

Dr. Enrique Espinosa Aquino
Director of the Institute of Health Sciences
